Fine Bent Grasses

GROUP No. 1—UPRIGHT BENTS

"Colonial" New Zealand Brown Top—Rhode Island—Prince Edward Island—Waipu Brown Top—Astoria—Oregon Bent—Coalfawn—Agrostis tenuis—capillaris—vulgaris.

Will thrive in dry, sandy soil. Particularly adapted to Eastern and New England conditions.

CANADIAN GOVERNMENT SEALED AND CERTIFIED—PRINCE EDWARD ISLAND BENT is extra hardy—non-creeping but spreading by underground root stocks. Almost immune to small brown patch. Requires less water than other bents. Native to acid soils, but will thrive anywhere, particularly if fed with a fertilizer high in nitrogen. Grown under rigid supervision of the Canadian Government and packed in 50-pound original sealed bags. 90 to 95% pure, 85 to 95% germination. No seed harvested if 5% redtop is found growing.

100 lbs. 2-50 lb. Canadian Government sealed bags.....	\$200.00
50 lbs. 1-50 lb. " " " "	105.00
10 lbs. Resealed by official distributor.....	22.00
5 lbs. " " " "	12.00

RHODE ISLAND BENT—COLONIAL NEW ZEALAND BROWN TOP not sealed or certified—grows same as above, very similar in nature but produced under less severe climatic conditions. See our general catalogue.

GROUP No. 3—VELVET BENT

Agrostis canina—grown at present in fairly pure condition on Prince Edward Island under government supervision.

SEALED AND CERTIFIED BY CANADIAN GOVERNMENT—TRUE VELVET—65 to 70% Pure Velvet, 25% other Bents—No Redtop.

10 lb. Canadian Government sealed bag.....	\$ 95.00
1 lb. Resealed by official distributor.....	10.00

Velvet Bent is also grown in Germany and in Rhode Island but not commercially pure enough to market, mostly mixed with chaff and redtop.

GROUP No. 2—CREEPING BENTS

"Creeping"—Seaside Oregon grown—Coos County—Cocoos Bent (a trade name for Seaside)—Washington or Metropolitan or other local strains of creeping Bent stolons. New Brunswick Creeping—Seaside (Agrostis maritima—palustris—stolonifera var. compacta) will thrive with less water than vegetative stolon Bents—but need more than upright Bents. Blend in turf with other grasses. Somewhat resistant to large Brown Patch. Adapted to warm humid conditions but also winterhardy. Experimental plots at Amherst—Boston—New York—Buffalo—Detroit—Pittsburgh and Chicago have gone through severe winter conditions splendidly.

OREGON STATE SEALED AND CERTIFIED COOS COUNTY SEASIDE CREEPING BENT—93 to 99% pure, 90 to 99% germination.

100 lbs. 2-50 lb. Oregon sealed bags.....	\$225.00
50 lbs. 1-50 lb. " " " "	115.00
10 lbs. Resealed by official distributor.....	25.00
5 lbs. " " " "	13.50

NEW BRUNSWICK CREEPING BENT sealed by the Canadian Government and certified by their Department of Agriculture, in 10-pound bags. A true creeper—possibly harder than Coos County and slightly finer blade but general habit the same.

100 lbs. 10-10 lb. Canadian Government sealed bags.....	\$300.00
50 lbs. 5-10 lb. " " " "	155.00
10 lbs. 1-10 lb. " " " "	35.00
5 lbs. Resealed by official distributor.....	18.50

GROUP No. 4—MIXED BENTS

"South German Mixed" so called creeping in error—contains about 70% upright—only about 2% creeping and sometimes 5 to 10% Velvet Bent. Should be free of redtop. Known as Agrostis species, also called Fiorin in error. Please refer to our general catalogue.

GROUP No. 5—REDTOP

Fiorin—Herds Grass—Hybrids of Redtop and Bent—Agrostis alba—stolonifera var. major (Palustris—vulgaris—obsolete) Marsh Bent—English Bent—White Bent. See our general catalogue.
